

MONOFLO
INTERNATIONAL, INC.

defining what comes next.

Always on the Move.

Monoflo partners with leading system integrators.

For distribution centers or manufacturing facilities... For diversified operations... F

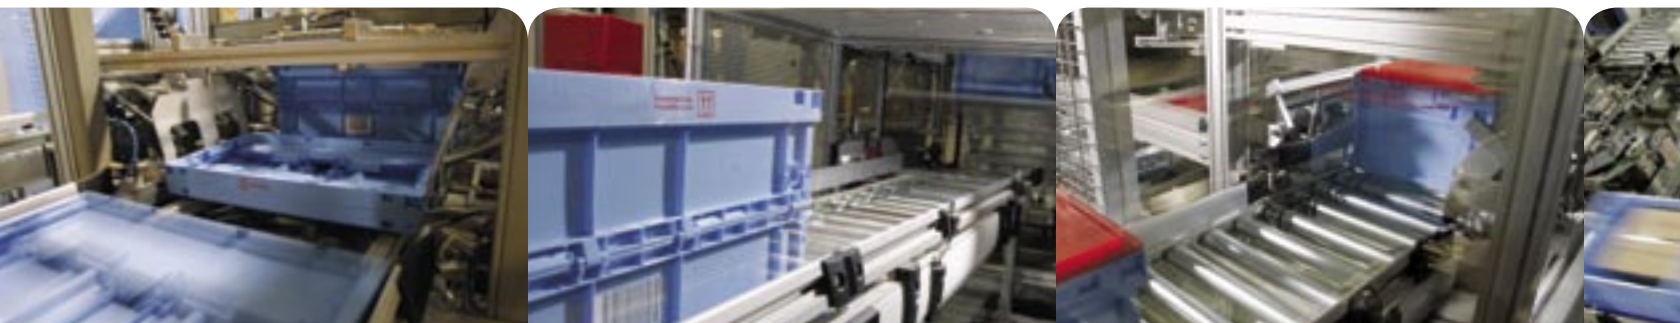

A proven partner for leading system integrators, Monoflo International manufactures high-quality, cost-effective material handling products. Our custom containers, trays and dollies can be designed and built to the exact specifications of any logistics project or automated storage and retrieval system (AS/RS).

Working in collaboration with customers and system integrators when automation projects are still on the drawing board, Monoflo uses more than 30 years of experience with injection-molded plastic technologies to plan, design, and engineer a customized system to precisely integrate with the larger automation initiative.

Our advanced planning and manufacturing process includes:

- Reviewing facilities specifications with the customer and system integrator.
- Developing prototypes for each material handling component.
- Testing and re-testing the precision of the components within the logistics system.
- Designing and building high-quality production molds to ensure timely deliveries of virtually identical product from start to finish.
- Verifying consistent production/part quality across high-volume production runs to ensure all components are fully functional for the life of the system.

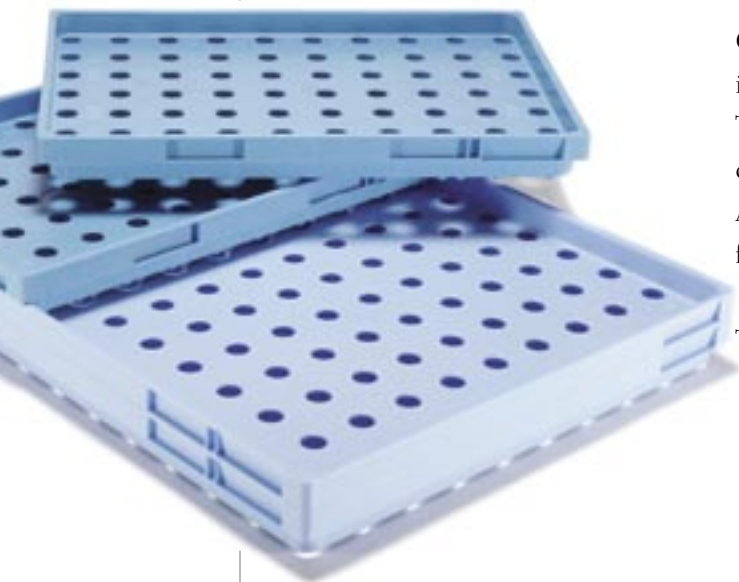

A pioneer in reusable collapsible containers, Monoflo helps its customers and partners keep business moving.

“Automating a distribution center is serious business and you must have the right partners to ensure quality operations and on-time performance. With Monoflo as a partner, we’ve exceeded our own stringent requirements.”

– Ron E. Link, Vice President, CVS/Pharmacy

For worldwide initiatives.

AS/RS Injection Molded Trays

Our effective and functional custom trays are used in automated, full-case storage and picking systems. Tolerances are critical, even under heavy load conditions and extreme temperature ranges. The AS/RS trays shown here are durable, lightweight, and fully customized to the specific application.

Tray features:

- 700 x 500 mm and 350 x 500 mm footprint to accommodate small and large cases.
- Angled barcode label surfaces for improved scanning accuracy.
- Large lifting slots for easy and secure automated handling in the system.
